Use-Case Flow Specification

System: Online Internship & Placement Preparation Portal

Use Case ID: UC-001

Use Case Name: Apply to Internship Listing (Includes: Evaluate Eligibility, Extends: Schedule Aptitude Test)

Primary Actor: Student (Candidate)

Secondary Actor: Recruiter (Listing Owner)

Supporting Actors: Email Notification Service, Placement Cell Admin

Preconditions & Postconditions

- **Preconditions:**

  The internship listing is active, with eligibility criteria (min CGPA, branch, deadline) configured by the Recruiter.

  The student is registered with a complete profile (CGPA, branch, resume) and a valid email address.

- **Postconditions:**

  Success: Application is recorded as "Applied", the action is logged with a timestamp, and a confirmation email is dispatched.

  Disqualified: Student is marked ineligible for that listing, the unmet criteria are shown, and no application record is created.

Main Success Scenario (Step-by-Step)

1. Initiate Application: Student browses the internship listings and selects a listing from the catalogue to view full details.

2. Review Application: Student reviews their auto-filled profile data and selects the resume to attach from their saved documents.

3. Submit & Validate: Student submits the application; the system validates that all mandatory fields (resume, profile) are present.

4. <<includes>> Evaluate Eligibility: System automatically runs the eligibility-check engine, comparing the student's CGPA, branch, and graduation year against the listing's configured criteria.

5. Determine Qualification: System confirms the student meets all eligibility criteria; application status is set to "Applied."

6. Record Application: System generates a timestamped application record linking the student, listing, and resume, and updates the recruiter's applicant list.

7. Dispatch Notification: System triggers the Email Notification Service to send an application confirmation with a reference ID.

8. <<extend>> Schedule Aptitude Test: If the listing requires a pre-screening test, the system automatically prompts the student to schedule or immediately attempt the associated aptitude test.

Alternate & Exception Flows

AF-1: Disqualification on Eligibility Criteria (at Step 4–5)

- 4a. The evaluation engine detects that the student does not meet ≥ 1 eligibility criterion (e.g., CGPA below the minimum, branch not listed).
- 4b. System marks the application as "Ineligible," displays the specific unmet criteria to the student, and does not forward the application to the recruiter.
- 4c. Student is shown similar listings they are eligible for. Use case terminates.

AF-2: Aptitude Test Deferred by Student (at Step 8)

- 8a. Student opts to attempt the scheduled test later rather than immediately.
- 8b. System saves the application status as “Applied – Test Pending” with a deadline matching the test's closing date.
- 8c. Email Notification Service sends a reminder with the test link as the deadline approaches. Use case pauses until the student re-engages.

EF-1: Network / Validation Service Interruption (at Step 3)

- 3a. System detects a network dropout or eligibility-check service timeout during submission.
- 3b. System caches the application draft locally, displays a retry notice, and automatically resubmits once connectivity is restored, without data loss.
